

Luwic Stress

Uncovering word accent in an extinct language family

Oscar Billing

Luwic Stress

A Comparative Study on Luwian, Lycian,
and Lydian Word Accent

Oscar Billing

Roadmap

1. Introduction

What is the state of Anatolian accentology?

Which languages are “Luwic”?

2. Methodology

How to locate the accent?

3. Example (agent nouns in *-lā-)

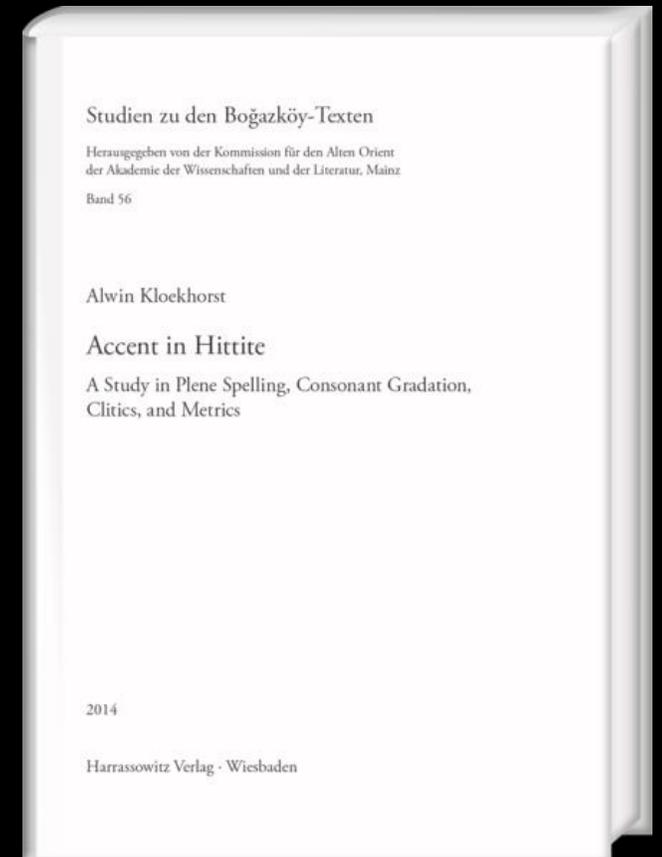

How can progress in Luwic accentology be achieved?

~~4. Typology~~

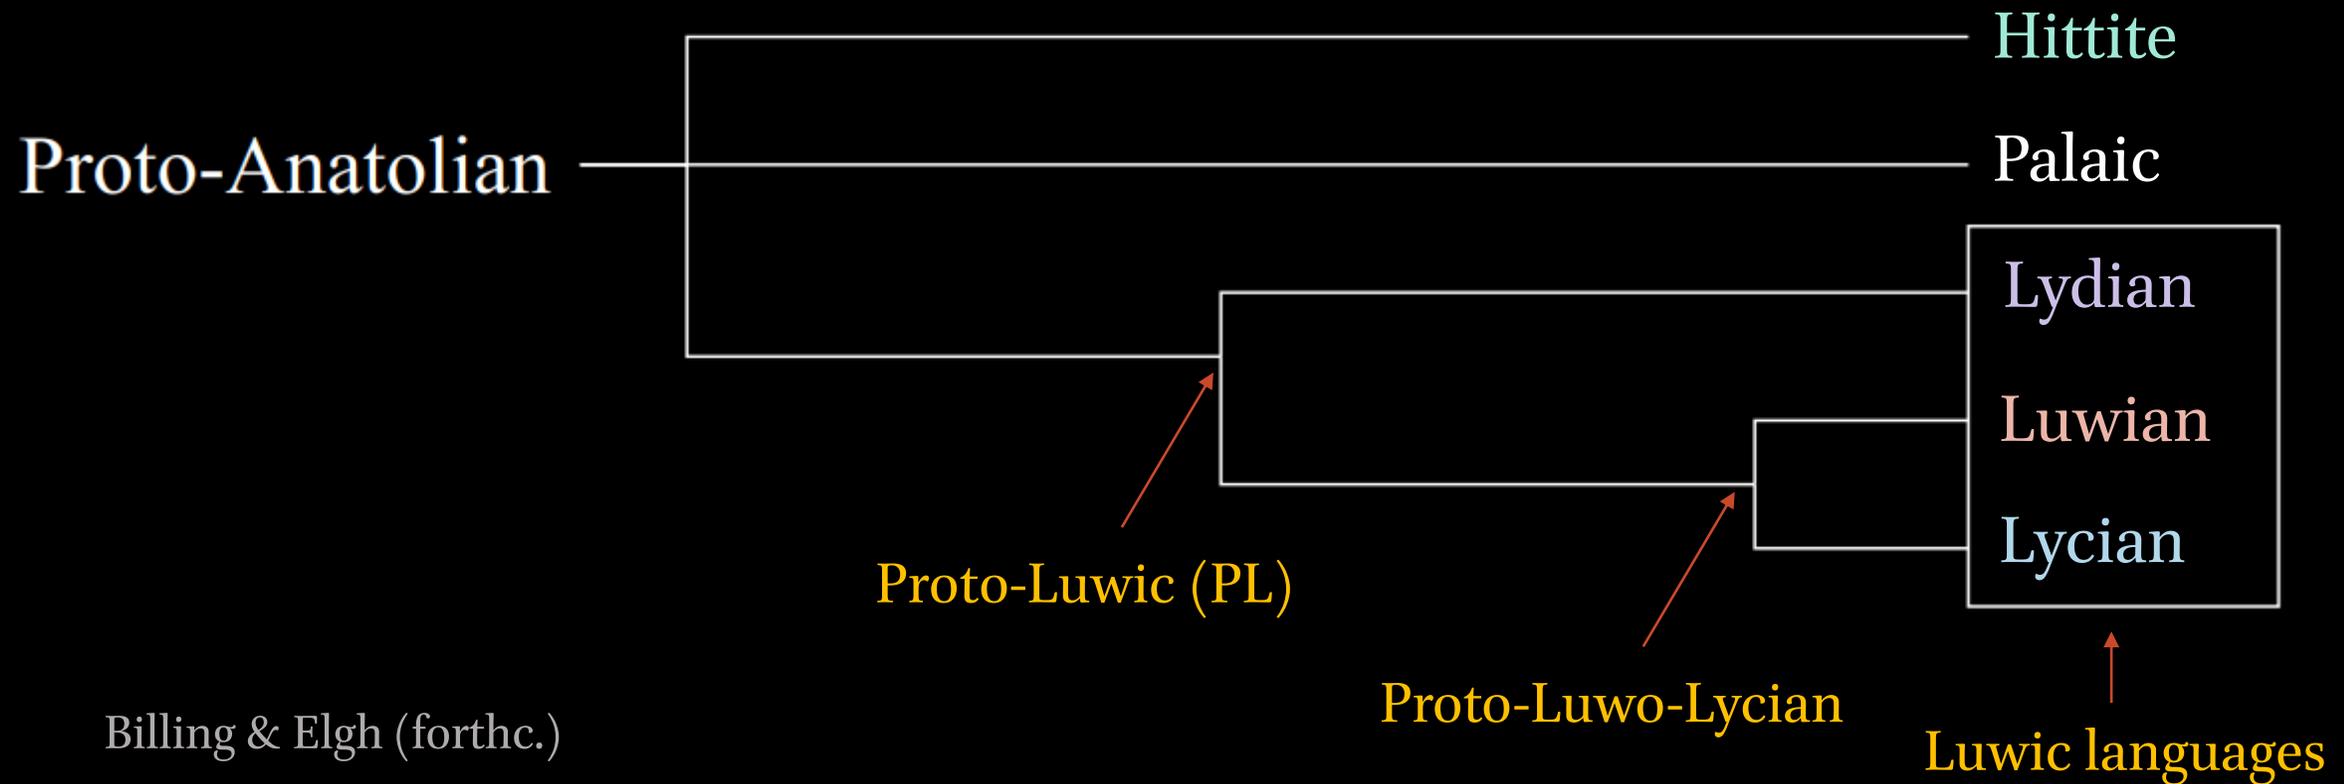

~~*What was the accent like in Luwic?*~~

Anatolian accentology

- Anatolian accent must be understood in **Indo-European** context
- **Hittite** has been well-studied
(cf. e.g. Kloekhorst 2014; Yates 2017)
- **Other Anat. languages** – not so much...
- **Recent progress in understanding of non-Hittite Anatolian languages = an opportunity!**

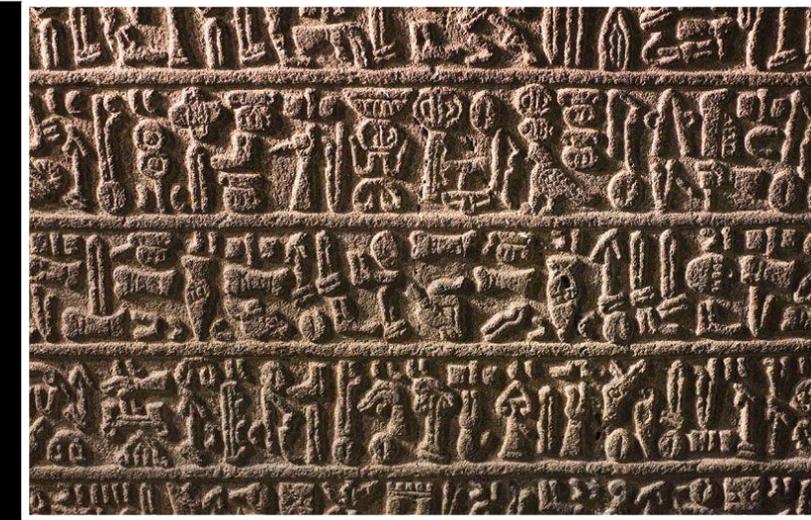

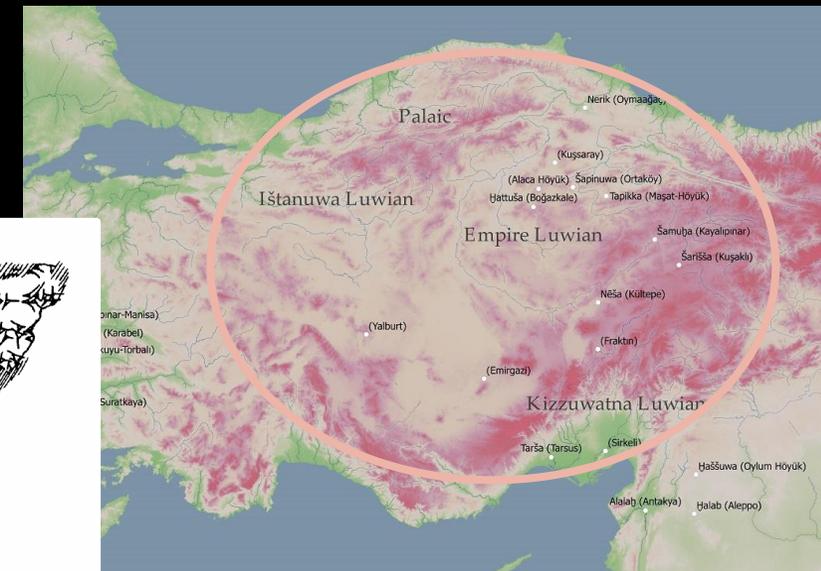

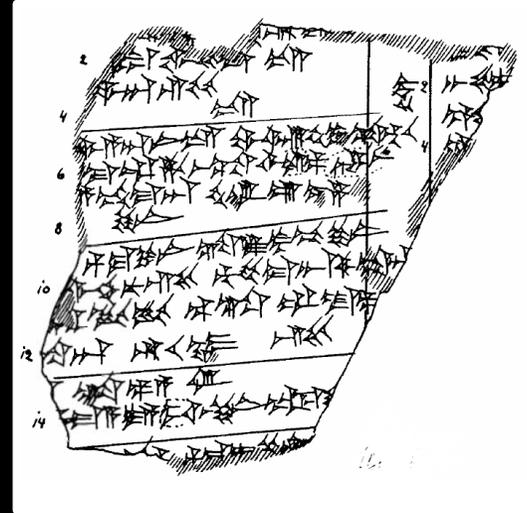

The Anatolian language family

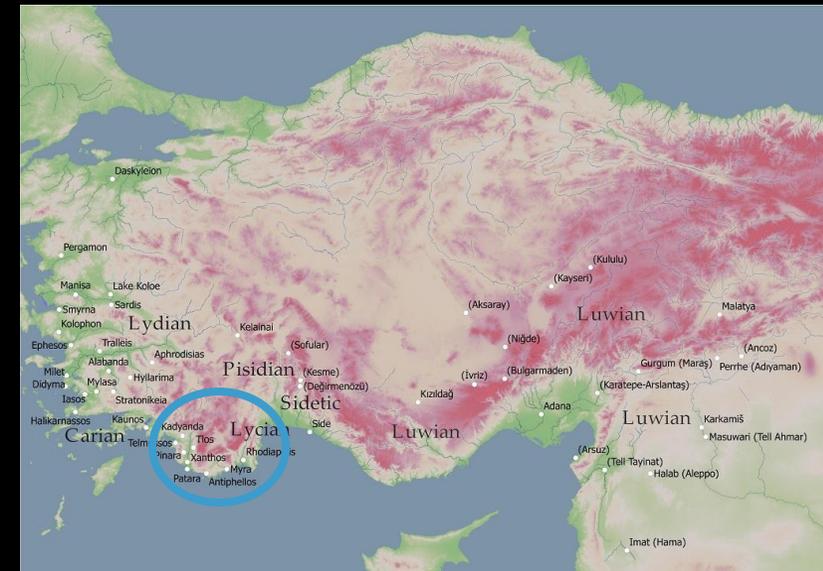

Luwian

- Attested 16th–7th cent. BCE
- Cuneiform vs. Hieroglyphic script
- Cuneiform:
 - 16th–13th cent. BCE
 - ca. 14,000 word tokens (Yakubovich, p.c.)
 - Mainly ritual texts, embedded in Hittite
 - Code switches in Hittite texts
e.g. “Gloss wedge words” (€, €€)
 - Various dialects

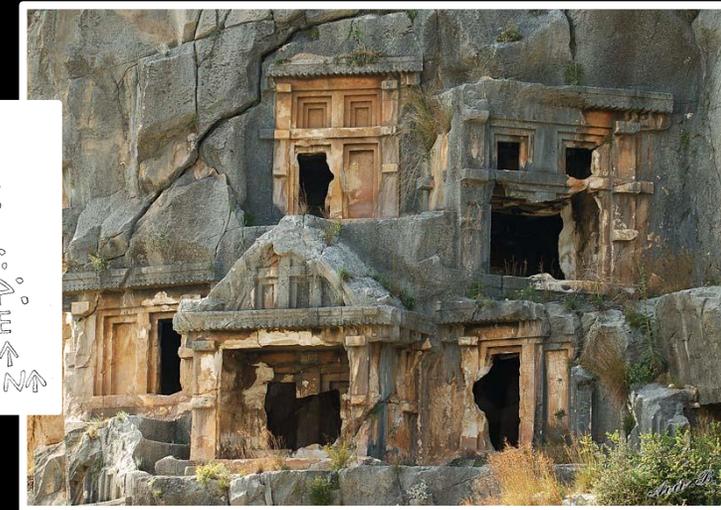

Lycian

- Attested ca. 500–300 BCE
- ca. 200 inscriptions + coins
- ca. 6,000 word tokens
- Alphabetic writing system
- Two dialects:
 - Lycian A (standard) vs.
 - Lycian B (poetic; “Milyan”)

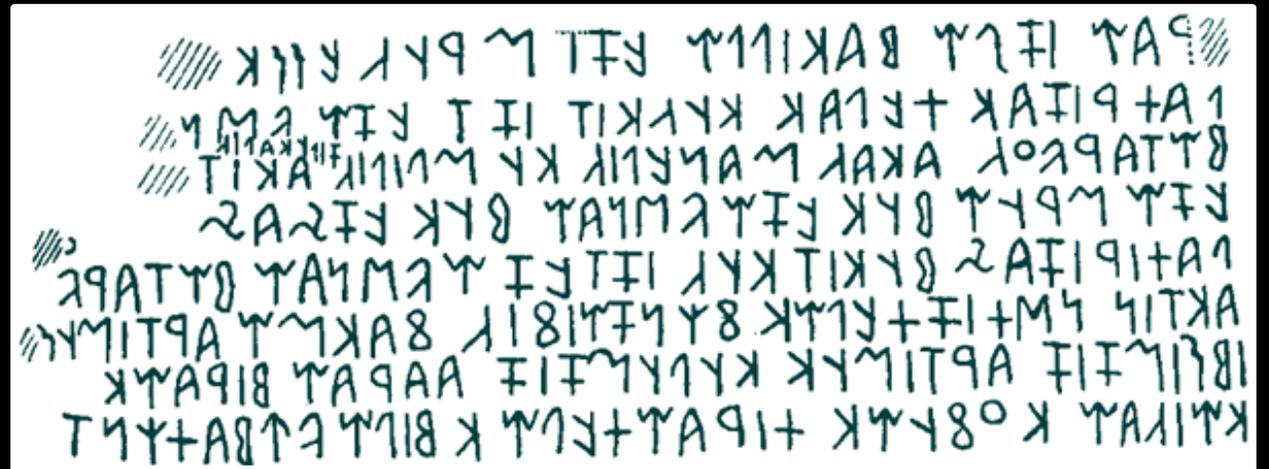

↑B↑ΛE: MASEIYME: VSSYIEIP:
VETARRP↑: TEΔEME: MOTAA↑:
PPEA↑IEIA↑E: PPEA↑P↑T↑ TE:
ETRTY: PLE: A↑BE: SLEIA↑A↑: TPPE
T↑TE: TEKA↑: KBE: TPPEIA↑ME:
T↑E: MAA↑: XPTTE: MPALEP:
F↑AP WEINE: SLETA↑E: TPX MELE
↑O F A↑PE: VSSYIEIP↑: TBAPOSA
IASYNE: VPAPEIN↑. O↑A↑P↑T↑: KOM↑I↑ENA↑

Lydian

- Attested ca. 700–100 BCE
Most from 5th–4th cents.
- Over 100 inscriptions in Lydia
- ca. 1,500 word tokens
- Alphabetic writing system
- Not well-understood

Locating the accent in Cuneiform Luwian

Plene spelling

- Addition of “redundant” vowel sign

e.g. ⟨CV-**V**-VC⟩
 ⟨**V**-VC-⟩

- Spells vowel length in **Hittite** (Rieken 2017: 19f.)
 - Thus also in Luwian

Can be used as accent heuristic

Locating the accent in Cuneiform Luwian

Plene spelling

- Etymologically short vowel spelled plene = accented!
 - Vowel lengthenings under the accent (Melchert 1994: 261-265)

Cf. e.g. ⟨na-a-wa⟩ = [ná:wa] ‘not’ < *né-ue

 ⟨a-pa-a-aš⟩ = [apá:s] ‘that’ < *h₁ob^hós

- When more than one plene vowel = more complicated

Cf. e.g. ⟨^rtar¹-pa-a-aš-ša-a-aš⟩ (KBo 29.63 ii[?] 6′) ‘ritual substitute’

??? [t(a)rpá:s:a:s] or [t(a)rpai:s:á:s] ???

Locating the accent in Cuneiform Luwian

Plene spelling

- But **not** every accented vowel is long! (and not every long vowel is accented)

Cf. e.g. ⟨ku-wa-ar-ti⟩ ‘cuts’ = [k^wárti] < *k^wér-ti

- But plene spelling is (more or less) optional!

KUB 35.45 (NS): ⟨ḫi-i-ru-un⟩ (iii 25′) vs. ⟨^ʾḫi-i^ʾ-ru-ú-un⟩ (ii 1) ‘oath’

KUB 35.45 (NS): ⟨ta-a-pa-ru⟩ (iii 24′) vs. ⟨[ta]-pa-a-ru⟩ (iii 9′) ‘?’

KUB 35.58 (NS): ⟨ḫi-ru-ú-un⟩ (iii 10′) vs. ⟨ḫi-i-ru-ú-u[n]⟩ (ii 7′) ‘oath’

- Sequences of type ⟨(-)ḫu-u(-)⟩ = unreliable (may be ligature) (Kimball 1999: 67f.; DCL: xi)

Locating the accent in Hieroglyphic Luwian

- Hieroglyphic Luwian script = largely useless for accent
(but cf. Versteegh 2017; 2018)

Hieroglyphic evidence not used here

Locating the Lycian accent

Syncope as an accentual heuristic

- Lycian has clearly undergone widespread syncope

cf. e.g. *hrppi* 'on; for'

tr̃m̃mili 'Lycian'

ḡr̃m̃ma 'command'

- Stressed syllables = not syncopated (Hock 1991: 92-94; Bybee et al. 1998: 282-284; Hyman 2009: 217)

Negative heuristic!

If a vowel was syncopated, it did *not* carry the accent

Locating the Lycian accent

Syncope as an accentual heuristic

- However, Lycian syncope **rules not certain** (Melchert 1994: 318-321; Hajnal 1995: 175-191)
- Phonotactic **blocking**

Syncope = only when result is **cluster licensed** by Lycian phonology

Locating the Lycian accent

Example: gentival adjectives in -Vhe/i-

Syncope in e.g.:

A teḡḡe/i- ‘paternal’ (< *tédehe/i-)

A laḡḡe/i- ‘in-law’ (< *ládahe/i- ‘of the wife’)

A punamaḡḡe/i- ‘of the totality’ (< *punamadehe/i-)

Thus: Syncope occurred in environment *d_h* (> *-dh- > -ḡḡ-)

But no syncope elsewhere! Why not?

Lack of clusters ***-xh-*, ***-ph-*, ***-lh-*, ***-mh-*, etc., in entire Lycian corpus!

Conclusion: Syncope of suffix *-Vhe/i-* most often phonotactically blocked

Locating the Lycian accent

Syncope as an accentual heuristic

- However, Lycian syncope rules **not certain** (Melchert 1994: 318-321; Hajnal 1995: 175-191)
- Phonotactic **blocking**

Syncope = only when result is cluster licensed by Lycian phonology

Method: treat every environment in **isolation**

Given words C_1VC_2V and C_1C_2V

↳ where C_1C_2V has undergone syncope

↳
$$\begin{array}{l} C_1VC_2V = C_1\underline{V}C_2V \\ C_1C_2V = C_1C_2\underline{V} < *C_1VC_2\underline{V} \end{array}$$

Locating the Lycian accent

Syllabic resonants as an accentual heuristic

- Signs *ṁ* and *ṅ* = often result of syncopated syllables with nasal coda; cf. e.g.:
Cf. e.g. ethnic appurtenance suffix Lyc. A *-ṅne/i-*, B *-wṅne/i-* < **-wene/i-* (cf. Luw. *-wann(i)-*)
3PL.PRES.ACT ending *-ṅti* from syncopated **-enti* (e.g. *marṅti* ‘they command’)
- Reasonable assumption 1: Syllable nuclei *ṁ* and *ṅ* = **unaccented**
- Reasonable assumption 2: Syllable nuclei *l* and *r* = also **unaccented**

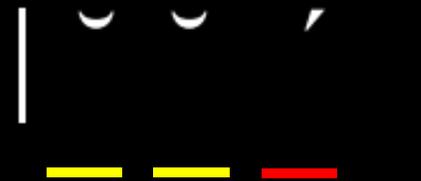

Another negative heuristic: syllabic resonants!

Locating the Lydian accent

Metrical evidence

- Inscriptions LW 10–15 = **poems**
characterised by metrical structure
- LW 11–14 = most regular:
4 rising **feet** per line
1 **foot** = 2–3 syllables
- Most common **foot** = anapaest
- Last two **feet** exhibit most regularity

(West 1972; 1975; Eichner 1986; 1987)

Locating the Lydian accent

Metrical evidence

Basic structure:

($\acute{\text{X}}$) $\breve{\text{X}}$ $\acute{\text{X}}$ | ($\acute{\text{X}}$) $\breve{\text{X}}$ $\acute{\text{X}}$ | $\acute{\text{X}}$ $\breve{\text{X}}$ $\acute{\text{X}}$ | $\breve{\text{X}}$ $\breve{\text{X}}$ $\acute{\text{X}}$ ||

Example (LW 11.2):

wāntas wic | *n areλ* | *katared=k=* | *ms iškos* ||

Locating the Lydian accent

Linguistic evidence

- Considering metrics + sign distribution: *ã, aa, ã, e, o* = always accented
 - **Allowed:** *wãnav, taacdav, tẽmwav, ešvav, anlolav*
 - **Not allowed:** ***wãnãv, **taacdãv, **tẽmwãv, **ešvãv, **anlolãv*
- Syllabic resonants (*l, λ, r, m, n, v*) = **unaccented**
- Sign *y* = unaccented /i/ (Gusmani 1983: 57-59; Melchert 1994: 342f.)
 - Cf. *qiraaλ* (LW 13.7) vs. *qyral* (LW 23.11)
- Signs *a, u, i* = ambiguous
- Lydian also exhibits syncope! (and apocope)

Čop's law

$*L > F / \acute{e}_-$ (Lenis, Fortis)

- Originally formulated for Luvian by Čop (1970)

mallit- 'honey' < **mélit-*

maddu- 'wine' < **méd^hu-*

- Also proven for Lycian by Kloekhorst (2012: 261)

ebette DAT/LOC.PL pronoun < **h₁ob^héd^hos* (cf. Hitt. *apēdas*)

- Lydian status = unknown!

Čop's law = determines Proto-Luwo-Lycian accent

Locating the accent: summary

Luwian (cuneiform)

- Accent correlates with **plene spelling**

Lycian

- Syncopated vowels = **unaccented**
- Syllabic resonants = **unaccented**

Lydian

- Metrics
- Certain signs are **accented** vs. **unaccented**

Let's do a case study!

Case study: Background

- Problem: **Luwic** languages are **scarcely** attested

Lack of cognates/word equations

Lack of comparanda for historical analysis!

- Solution: **morphological types!**

Exponents of a type > # Attestations of individual lexemes

- Assumption: A given type is **uniformly accented**

Agent nouns in *-lā-

- All **Luwic** languages: productive *a*-stem agent noun type in *-lā-
 - Luwian: -*alla*- (e.g. *kwananalla*- ‘carver’)
 - Lycian: -*ala*- (e.g. *gasabala*- ‘treasurer’)
 - Lydian: -*la*- (e.g. *mršla*- ‘defiler’)
- Related to adjectival type Luw. -*alla/i*-, Lyc. -*ele/i*-, Lyd. -*l(i)*-
- Reconstruction: PL *-*Vlā*- < PIE *-*V-leh*₂-

But how was the type accented?

Let's look at the evidence!

Agent nouns in *-lā-: Luwian evidence

Cuneiform Luwian candidate stems:

al(l)allā- ‘pitfall (?)’ or ‘inimical domain’

auwalla- ‘(a plant?)’

hamsukkallā- ‘great-grandchild’

hūwayalla- ‘helper’

hūrtiyalla- ‘(vessel)’

kalla- ‘(mineral?)’

dussaniyalla- ‘maker of strong ones (?)’

warpalla- ‘(part of wagon?)’

zazkitalla- ‘stock (?)’

Agent nouns in *-lā-: Luwian evidence

Some are never spelled plene and thus uninformative:

Stem	Form	Place of attestation
<i>auwalla-</i> '(a plant?)'	⟨€a-ú-wa-al-la-aš⟩	KUB 36.96: 11' (LNS)
	⟨a-ú-wa-al-la-an⟩	KBo 19.142 ii 18' (NS)
<i>kalla-</i> '(mineral?)'	⟨ ^{NA4} kal-la-an-zi⟩	KUB 27.29 iii 15 (NS)
	⟨ ^{NA4} kal-l[a-an-zi]⟩	KUB 27.29 iii 13 (NS)
<i>warpalla-</i> '(part of wagon?)'	⟨€€wa-a[r]-pa-al-la⟩	KpT 1.56 iii 66' (NS)
	⟨€€w[a-a]r-pa-al-la⟩	KpT 1.56 iii 67' (NS)
<i>zazkitalla-</i> 'stock (?)'	⟨za ¹ -az-ki-tal-la-an⟩	KUB 16.77 iii 10 (NS)
	⟨€za-az-ki-tal-la-za⟩	KUB 46.42 iii 3 (LNS)
	⟨€€za-az-ki-tal-la-za⟩	KUB 46.42 iii 4 (LNS)

Semantically, none of these are obviously agent nouns either!

Agent nouns in *-lā-: Luwian evidence

Cuneiform Luwian candidate stems:

al(l)allā- ‘pitfall (?)’ or ‘inimical domain’

~~*auwalla* ‘(a plant?)’~~

hamsukkallā- ‘great-grandchild’

hūwayalla- ‘helper’

hūrtiyalla- ‘(vessel)’

~~*kalla* ‘(mineral?)’~~

dussaniyalla- ‘maker of strong ones (?)’

~~*warpalla* ‘(part of wagon?)’~~

~~*zazkitalla* ‘stock (?)’~~

Agent nouns in *-lā-: Luwian evidence

Some are not likely exponents of the type

al(l)allā- ‘pitfall (?)’ or ‘inimical domain’

- Many plene spellings on the final syllable (x15)
- But semantics make agent noun unlikely... (DCL: s.v.; Rieken & Yakubovich 2022: 273f.)

hamsukkallā- ‘great-grandchild’

- Attested 3 times, always with stem-final **plene spelling**
- But is actually diminutive in *-kkalla-* (cf. Lat. *-cula*, e.g. *mātercula* ‘little mother’)

not agent noun in *-alla-* (Sasseville 2014/2015: 116f.)

Agent nouns in *-lā-: Luwian evidence

Cuneiform Luwian candidate stems:

~~*al(l)allā* ‘pitfall (?)’ or ‘inimical domain’~~

~~*auwalla* ‘(a plant?)’~~

~~*hamsukkallā* ‘great grandchild’~~

hūwayalla- ‘helper’

hūrtiyalla- ‘(vessel)’

~~*kalla* ‘(mineral?)’~~

dussaniyalla- ‘maker of strong ones (?)’

~~*warpalla* ‘(part of wagon?)’~~

~~*zazkitalla* ‘stock (?)’~~

Agent nouns in **-lā-*: Luwian evidence

hūwayalla- ‘helper’ & *hūrtiyalla-* ‘(vessel)’

- Both only attested in Hittite contexts (“Empire Luwian”)
- Each spelled plene once on **first syllable**
- Recall: plene spelling ⟨*ḫu-u-*⟩ = **unreliable**

dussaniyalla- ‘maker of strong ones (?)’

- Only attested in Iṣtanuwa Luwian song
- No plene spelling!
- **Metrics** indicate *dússaniyàlla-* (Billing 2025)
- **But circularity!**

Agent nouns in *-lā-: Luwian evidence

Cuneiform Luwian candidate stems:

~~*al(l)allā* ‘pitfall (?)’ or ‘inimical domain’~~

~~*auwalla* ‘(a plant?)’~~

~~*hamsukkallā* ‘great grandchild’~~

hūwayalla- ‘helper’

Initial accent??

hūrtiyalla- ‘(vessel)’

Initial accent??

~~*kalla* ‘(mineral?)’~~

dussaniyalla- ‘maker of strong ones (?)’

Initial + secondary suffix accent??

~~*warpalla* ‘(part of wagon?)’~~

~~*zazkitalla* ‘stock (?)’~~

Agent nouns in *-lā-: Luwian evidence

Cuneiform Luwian evidence – summary:

- Evidence = scarce!
- Evidence = weak!
- Maybe **initial** accent?

However, note geminate *-ll-!!* (important later)

al(l)allā ‘pitfall (?)’ or ‘inimical domain’

auwalla ‘(a plant?)’

hamsukkallā ‘great-grandchild’

hūwayalla ‘helper’

hūrtiyalla ‘(vessel)’

kalla ‘(mineral?)’

dussaniyalla ‘maker of strong ones (?)’

warpalla ‘(part of wagon?)’

zazkitalla ‘stock (?)’

Agent nouns in *-lā-: Lycian evidence

Lycian candidate stems:

B *abrala*- ‘?’

(?) A *azzala*- ‘decree (?)’

A *gasabala*- ‘treasurer’

B *mutala*- ‘mighty (one) (?)’

A *parttala*- ‘?’

B *qidrala*- ‘priest of animal sacrifice (?)’

B *qrbblala*- ‘?’

B *r̃mpala*- ‘pillar official (?)’

A *sttala*- ‘stele’

A *tijala*- ‘penalty-administrator (vel sim.)’

B *trppala*- ‘substitute (vel sim.) (?)’

B *turaxxsala*- ‘one of Mount Thorax (?)’

B *xumala*- ‘(priest) (?)’

B *zajala*- ‘?’

A *zala*- ‘share-administrator (?)’

B *ziwala*- ‘(priest) (?)’

Agent nouns in *-lā-: Lycian evidence

Stem	Relevant environment(s)	Syncope?
B <i>abrala</i> - ‘?’	#_br; br_l	???
A <i>azzala</i> - ‘decree (?)’	#_z; z_l	???
A <i>gasabala</i> - ‘treasurer’	g_s; s_b; b_l	???
B <i>qidrala</i> - ‘priest of animal sacrifice (?)’	q_dr; dr_l	???
A <i>sttala</i> - ‘stele’	st_l	???
A <i>tijala</i> - ‘penalty-administrator (vel sim.)’	t_j; j_l	???
B <i>turaxxsala</i> - ‘one of Mount Thorax (?)’	t_r; r_xs; xs_l	???
B <i>zajala</i> - ‘?’	z_j; j_l	???
A <i>zala</i> - ‘share-administrator (?)’	z_l	???

- A *gasabala*- ‘treasurer’ & *sttala*- ‘stele’ = loans!
- A *azzala*- ‘decree (?)’ = probably not agent noun!

Agent nouns in *-lā-: Lycian evidence

Lycian candidate stems:

~~B *abrala*- ‘?’~~

~~(?) A *azzala*- ‘decree (?)’~~

~~A *gasabala*- ‘treasurer’~~

B *mutala*- ‘mighty (one) (?)’

A *parttala*- ‘?’

~~B *qidrala*- ‘priest of animal sacrifice (?)’~~ ~~B *zajala*- ‘?’~~

B *qrbblala*- ‘?’

B *rñpala*- ‘pillar official (?)’

~~A *sttala*- ‘stele’~~

~~A *tijala*- ‘penalty administrator (vel sim.)’~~

B *trppala*- ‘substitute (vel sim.) (?)’

~~B *turaxxsala*- ‘one of Mount Thorax (?)’~~

B *xumala*- ‘(priest) (?)’

~~A *zala*- ‘share administrator (?)’~~

B *ziwala*- ‘(priest) (?)’

Agent nouns in *-lā-: Lycian evidence

Lycian candidate stems:

B *mutala-* ‘mighty (one) (?)’

A *parttala-* ‘?’

B *qrbblala-* ‘?’

B *r̃mpala-* ‘pillar official (?)’

B *trppala-* ‘substitute (vel sim.) (?)’

B *xumala-* ‘(priest) (?)’

B *ziwala-* ‘(priest) (?)’

Agent nouns in *-lā-: Lycian evidence

B *qrbblala-* ‘?’ & B *rṃpala-* ‘pillar official (?)’

- Resonant nuclei in first syllable = **unaccented**
- No other accent heuristics
- Either accent *-ála-* or *-alá-* = possible

penultimate or **final**

Agent nouns in *-lā-: Lycian evidence

Lycian candidate stems:

B *mutala-* ‘mighty (one) (?)’

(?) A *parttala-* ‘?’

(?) B *qrbblala-* ‘?’

B *r̃mpala-* ‘pillar official (?)’

B *trppala-* ‘substitute (vel sim.) (?)’

B *xumala-* ‘(priest) (?)’

B *ziwala-* ‘(priest) (?)’

penultimate or **final**

penultimate or **final**

Agent nouns in *-lā-: Lycian evidence

B *mutala-* ‘mighty (one) (?)’ penultimate

- *mutala* (TL 44d.33); could also be NOM/ACC.PL.N of *mutele/i-*
- Cf. Lyc. A PN *mutlēi* (M 210; TL 150.2) < (?) **mutelēi* (*-ón- + -i-; cf. Melchert 2013: 34)

A *parttala-* ‘?’ penultimate??

- Cf. again A *mutlēi*, but context is strictly *rt_l* not *t_l*
- May **not** be agent noun! (context suggests offering)

Agent nouns in *-lā-: Lycian evidence

B *trppala-* ‘substitute (vel sim.) (?)’ **penultimate**

- Cf. B *tbiplē : trpplē* ‘twofold, threefold’ (TL 44c.53)
- *tbiplē : trpplē* < **tbiplē*, *triplē* < **dui-plóm* and **tri-plóm* (Eichner 1992: 62; 74)
- Thus: #*trpl-* = licenced result of syncope!

B *xumala-* ‘(priest) (?)’ **penultimate?**

- Cf. A/B *m_la-* ‘(offering)’ < **molh₃-éh₂* (cf. Luw. *malhassa-* ‘ritual’; eDiAna-ID 2285)
- Suggests syncope in *m_l*

Agent nouns in *-lā-: Lycian evidence

B *ziwala-* '(priest) (?)'

penultimate?

- Syncope in *w_R* = common!
 - Cf. e.g. appurtenance suffix Lyc. A *-ñne/i-*, B *-wñne/i-* < *-*wene/i-*
- Syncope in *w_l* maybe attested in A *la^{-ti}* 'to be dead' ← **la-* 'death' < **g^wolH-éh₂-*
 - Cf. HLuw. *wala* 'fatally' < 'for death'

Agent nouns in *-lā-: Lycian evidence

Lycian candidate stems:

(?) B *mutala-* ‘mighty (one) (?)’

penultimate

(?) A *parttala-* ‘?’

(?) **penultimate**

(?) B *qrbblala-* ‘?’

penultimate or **final**

B *r̃mpala-* ‘pillar official (?)’

penultimate or **final**

B *trppala-* ‘substitute (vel sim.) (?)’

penultimate

B *xumala-* ‘(priest) (?)’

(?) **penultimate**

B *ziwala-* ‘(priest) (?)’

(?) **penultimate**

Agent nouns in *-lā-: Lycian evidence

Lycian candidate stems:

(?) B <i>mutala-</i> ‘mighty (one) (?)’	penultimate
(?) A <i>parttala-</i> ‘?’	(?) penultimate
(?) B <i>qrbblala-</i> ‘?’	penultimate
B <i>r̃mpala-</i> ‘pillar official (?)’	penultimate
B <i>trppala-</i> ‘substitute (vel sim.) (?)’	penultimate
B <i>xumala-</i> ‘(priest) (?)’	(?) penultimate
B <i>ziwala-</i> ‘(priest) (?)’	(?) penultimate

Collapsing “**penultimate** or **final**” category into “**penultimate**” category

Agent nouns in *-lā-: Lycian evidence

Lycian candidate stems:

(?) B <i>mutála-</i> ‘mighty (one) (?)’	penultimate
(?) A <i>parttála-</i> ‘?’	(?) penultimate
(?) B <i>qrbblála-</i> ‘?’	penultimate
B <i>rñpála-</i> ‘pillar official (?)’	penultimate
B <i>trppála-</i> ‘substitute (vel sim.) (?)’	penultimate
B <i>xumála-</i> ‘(priest) (?)’	(?) penultimate
B <i>ziwála-</i> ‘(priest) (?)’	(?) penultimate

Evidence points to **penultimate** accent, i.e. *-ála-*

Agent nouns in *-lā-: Lydian evidence

Lydian candidate stems:

caqrla- ‘one of *cēqra-*’

isla- ‘?’

kanlela- ‘(month)’

mršla- ‘defiler (vel sim.)’

tanla- ‘?’

tarpla- ‘substitution’

ταλαλα- ‘?’

Agent nouns in *-lā-: Lydian evidence

Accent-indicating signs

caqla- ‘one of *cēqra-*’

final

- Attestation ACC.SG / DAT.PL *caqlā̃ν* (LW 14.5) proves **final** accent

isla- ‘?’

final

- Attestation NOM.SG / ACC.PL? *islaaṣ* (LW 13.13) proves **final** accent
- But uncertain meaning!

tanla- ‘?’

final

- Attestation DAT.SG *tanlaλ* (LW 46.5) proves **final** accent (otherwise ****tānlaλ**)
- But uncertain meaning!

Agent nouns in *-lā-: Lydian evidence

Lydian candidate stems:

caqrla- ‘one of *cēqra-*’

final

(?) *isla-* ‘?’

final

kanlela- ‘(month)’

mršla- ‘defiler (vel sim.)’

(?) *tanla-* ‘?’

final

tarpla- ‘substitution’

ταλαλα- ‘?’

Agent nouns in *-lā-: Lydian evidence

Metrical evidence

mršla- ‘defiler (vel sim.)’ **final**

- Form *mršlas* (LW 14.7) closes third foot = **final** accent
 - [...] *mršlas* | *šitarfλos* ||
- Syllabic resonant *-r-* = **unaccented**; suggests **final** accent

tarpla- ‘substitution’ **final**

- Form *tarplas* (LW 13.6) closes line = **final** accent
 - [...] *ul=τ=iη kot|tis tarplas* ||
- But meaning suggests **not** agent noun!

Agent nouns in *-lā-: Lydian evidence

Lydian candidate stems:

caqrla- ‘one of *cēqra-*’ **final**

(?) *isla-* ‘?’ **final**

kanlela- ‘(month)’

mršla- ‘defiler (vel sim.)’ **final**

(?) *tanla-* ‘?’ **final**

(?) *tarpla-* ‘substitution’ **final**

ταλαλα- ‘?’

Agent nouns in *-lā-: Lydian evidence

kanlela- '(month)'

- Meaning suggests **not** agent noun! (but month-name could be secondary)
- Two stems: *kanlela-* vs. *kanlala-*

<i>kanlelaλ</i>	LW 43.2 (5 th – 4 th cent. BCE)	older
	LW 50.1 (323/322 BCE)	younger
<i>kanlalaλ</i>	LW 41.3 (343 BCE)	younger

stem *kanlela-* must be **penultimate**

stem *kanlala-* is ambiguous (**penultimate** or **final**)

Agent nouns in *-lā-: Lydian evidence

ταλαλα- ‘?’

- Attestation ACC.SG / DAT.PL *ταλαλαν* (LW 13.8) proves **non-final accent**
- Otherwise ***ταλαλᾶν*
- But: if DAT.PL, then stem may be *ταλαλ(i)-*!

Agent nouns in *-lā-: Lydian evidence

Lydian candidate stems:

caqrla- ‘one of *cēqra-*’

final

(?) *isla-* ‘?’

final

(?) *kanlela-* ‘(month)’

penultimate

(old)

mršla- ‘defiler (vel sim.)’

final

(?) *tanla-* ‘?’

final

(?) *tarpla-* ‘substitution’

final

(??) *ταλαλα-* ‘?’

initial or **penultimate**

Agent nouns in *-lā-: Lydian evidence

Lydian candidate stems:

caqrla- ‘one of *cēqra-*’

final

(?) *isla-* ‘?’

final

(?) *kanlela-* ‘(month)’

penultimate

(old)

mršla- ‘defiler (vel sim.)’

final

(?) *tanla-* ‘?’

final

(?) *tarpla-* ‘substitution’

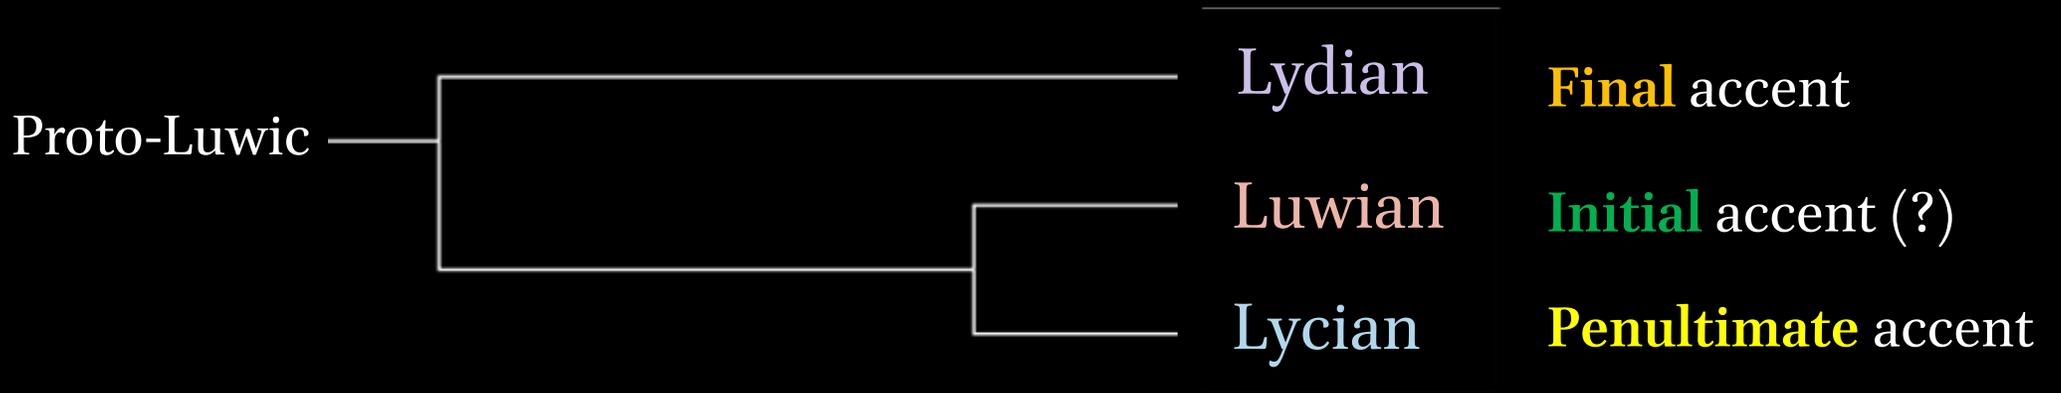

final

(??) *ταλαλα-* ‘?’

initial or **penultimate**

Most evidence points to **final** accent

Agent nouns in **-lā-*: Synthesis

What was the accent in Proto-Luwic?

Agent nouns in **-lā-*: Synthesis

What is the accent in Proto-Luwo-Lycian?

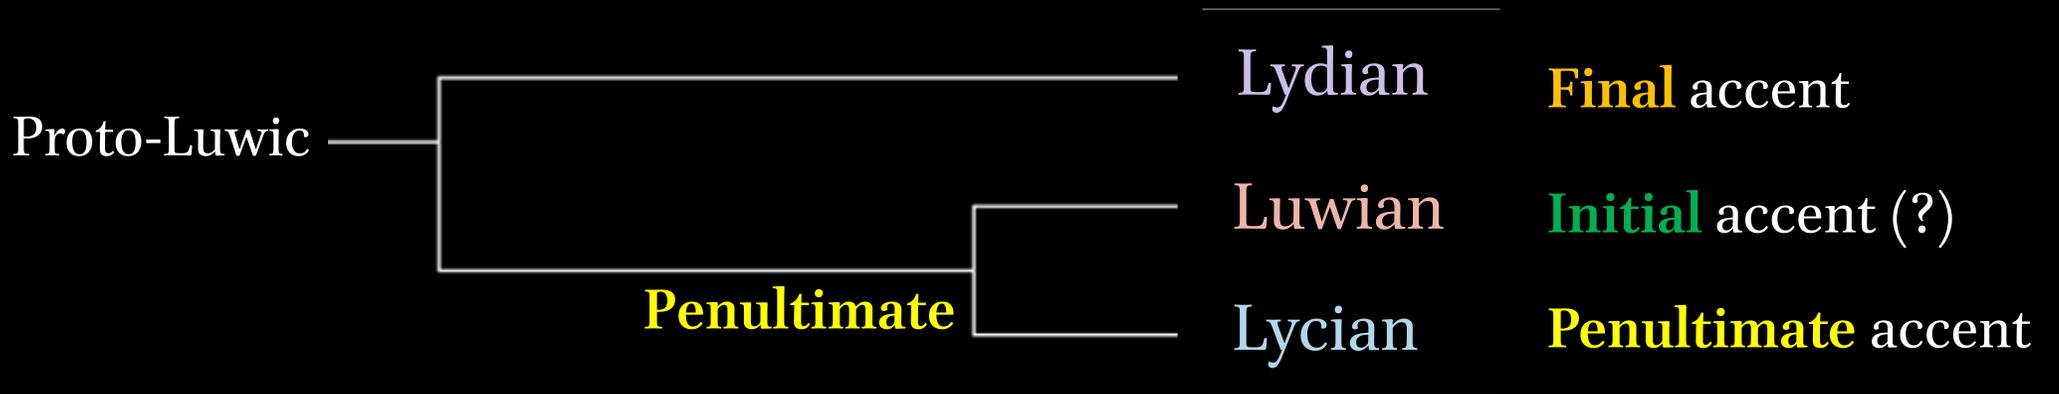

- Luwian = **initial** accent
- Lycian = **penultimate** accent

Geminate in Luw. *-alla-* requires Čop's law! (Sasseville 2014/2015)

- Thus, Proto-Luwo-Lycian reconstruction = **-éllā-*

Proto-Luwo-Lycian = **penultimate**

Agent nouns in **-lā-*: Synthesis

penultimate vs. **final** accent?

Agent nouns in *-lā-: Synthesis

Three arguments in favour of penultimate accent

Argument #1: Hittite *-āla-*

- Hittite agent noun type in *-āla-* < *-ó-leh₂- (Berman 1972: 119-127; GrHL²: 88f.)

Cf. e.g. ^{LÚ}*asusāla-* '(temple personnel)'

^{LÚ}*tappāla-* '(kitchen functionary)'

^{LÚ}*zuppāla-* '(kitchen functionary)'

- If *accentually* comparable,
= circumstantial evidence for **penultimate** accent

Agent nouns in *-lā-: Synthesis

Three arguments in favour of penultimate accent

Argument #2: Lyd. *kanlela-* vs. *kanlala-*

- Oldest stem variant is *kanlela-*
 - Matches Luwo-Lycian **penultimate** accentuation!
- Perhaps: *kanlala-* is innovated variant, productive **oxytonesis**
- Accent retained in *kanlela-* because month name

Agent nouns in *-lā-: Synthesis

Three arguments in favour of penultimate accent

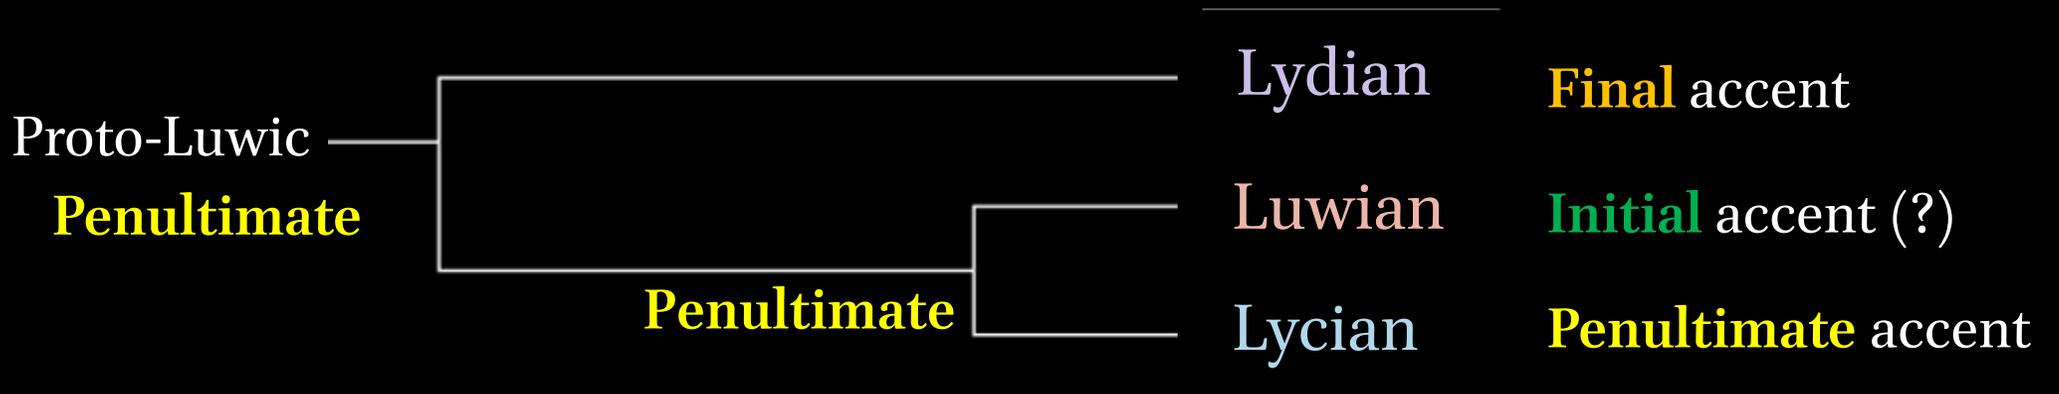

Argument #3: Gr. κάπηλος ‘merchant’

- Per Oettinger: κάπηλος ← Lyd. *kapela- (Oettinger 2021: 120-122)
- Sound substitution Gr. -η- < Lyd. -e- = **strongly supported**

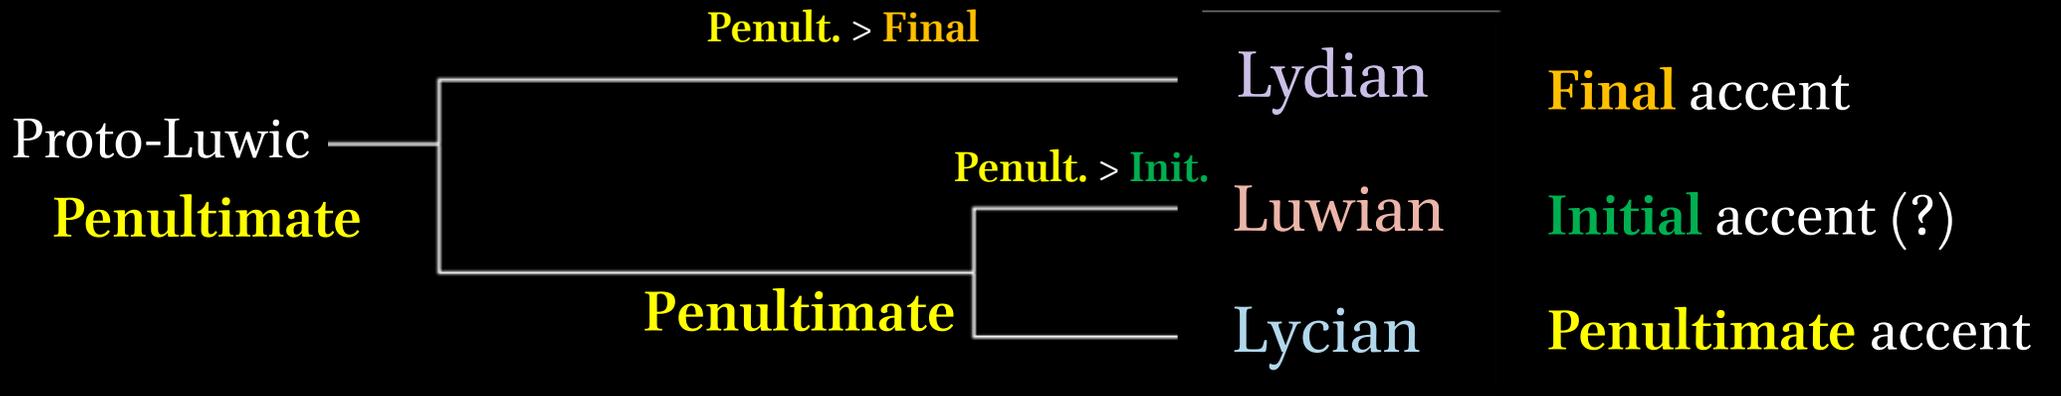

(Gusmani 1988: 191f.; Melchert 1994: 343; Gérard 2005: 35 n. 35; Kloekhorst 2023: 119)

- Sign -e- = **accent-indicating**
- Points to a prehistoric Lydian agent noun with **penultimate** accent!

Agent nouns in **-lā-*: Synthesis

Agent nouns in **-lā-*: Synthesis

Agent nouns in *-lā-: Synthesis

Accent retraction in Luwian

(**Penultimate** > **Initial**)

- many parallels, e.g.:
 - Accented reduplicants (cf. e.g. *tātariyamman-* ‘curse’)
 - Denominal verbs in *-a-ti* (a story for another time...)
 - Substantival *a*-stems (a story for another time...)

Oxytonesis in Lydian

(**Penultimate** > **Final**)

- more difficult to explain
 - Perhaps analogy to adjectival type in *-ló-?
 - Note e.g. NOM.SG.C *-las* < *-lós & *-lās

Summary and conclusion

- The **Luwian** accent = determined via:
Cuneiform plene spelling
- The **Lycian** accent = determined via:
Syncope Syllabic resonants
- The **Lydian** accent = determined via
Signs Metrics Syncope Syllabic resonants
- The Proto-Luwo-Lycian accent = determined via Čop's law
- The agent noun type in **-lā-* was accented **-élā-* in Proto-Luwic

Luwic accentology is **DIFFICULT** but **POSSIBLE**

Thank you!
